Manual Import of Yusen Report to SQL Server	3

Summary

In order to mass log the files that come on the weekly Yusen 30-Day Forecast report, the report is imported into IAH's SQL Server for data formatting and translating. Once translated, data is output to the desktop script input files for the user to run a CFIT desktop script.

Scripts Locations

1. Mass Logging Version - Logs all MBLs (1 MBL per file) except where the origin is Chittagong
 - a. "F:\Scripting\Import\CHB_IMPORT_ACADEMY_QUICKLOG\INDEXED_VERSION\CHB_IMPORT_ACADEMY_MASS_LOG_VERSION_003.edb"
2. Single File Version - Logs Multiple MBLs in 1 file (used for Chittagong Shipments)
 - a. "F:\Scripting\Import\CHB_IMPORT_ACADEMY_QUICKLOG\INDEXED_VERSION\CHB_IMPORT_ACADEMY_QUICKLOG_INDEXED_VERSION_CHITTAGONG_MULTI_MB_004.edb"

Input/Output Files

1. Skipped files, list of MBLs that aren't logged and the date it tried to log
 - a. "F:\Scripting\Import\CHB_IMPORT_ACADEMY_QUICKLOG\INDEXED_VERSION\Output\Skipped_Files.csv"

Communication Plan

Please submit a ticket through PMA

1. For any changes or updates to the Academy Yusen 30 Day Report, including column name changes, newly added columns, and removed columns.
2. For any enhancements to the script

- For any issues with the Desktop Scripts, please include screenshots

Weekly Updates

- *Place the report in an F Drive location: F:\FTP\CHB_ACADEMY_YUSEN_REPORT**

How It Works

Overview of major steps

- The Yusen 30 day forecast report gets emailed weekly as an Excel file
- The report gets uploaded to IAH's SQL Server
- SQL Server will output the input files for the Desktop Script
- User runs script in CFIT
- Origin Ports are managed in Input/ports_origin.csv

Logic

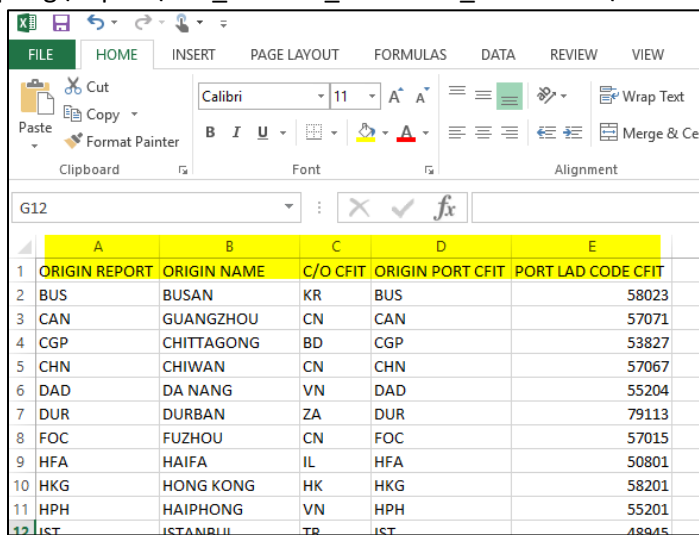

- Script logs every applicable file based on Masterbill Number (1 masterbill per file)
- Excludes shipments from Chittagong (Load port = CGP)

User Guide

How to Update Origin Ports

- Open in Excel

"F:\Scripting\Import\CHB_IMPORT_ACADEMY_QUICKLOG\INDEXED_VERSION\Input\ports_origin.csv"

- Modify the port data (refer to above screenshots)
 - ORIGIN REPORT** column is the port code provided by the 30 day Yusen Report
 - ORIGIN NAME** column is just for user reference
 - C/O CFIT** column is the country of origin required by CFIT
 - ORIGIN PORT CFIT** column is the origin port code required for CFIT
 - PORT LAD CODE CFIT** column is the 5-digit code required for CFIT

Known Issues/Notes

1. 3/6/2018 – Migrated to SQL Server from Macro because was taking hours to run due to it being over 18,000 lines long
2. **3/6/2018 – Meeting Notes :**
 - a. Create an output for all of the skipped MBLs for later investigation eta/Thursday
 - b. GBO need to write a query to match MBLs against ETMS to avoid the script running through the same files
